Stellingen behorende bij het proefschrift 'Urothelial Cell Carcinoma, Patterns of care and the visualization of ureteric carcinoma'

Annemarie Leliveld-Kors, 26 augustus 2014

1. Patients of older age and treated in non-teaching hospitals have a lower chance to undergo adjuvant treatment after trans urethral resection of high risk non-muscle invasive bladder cancer. *(dit proefschrift)*
2. Only one third of the patients diagnosed with muscle invasive bladder cancer is treated according the golden standard: a pelvic lymphnode dissection, radical cystectomy followed by a urinary diversion. *(dit proefschrift)*
3. Higher age, more co morbidity, higher age and more advanced TNM stage are predictive factors for abstaining from cystectomy in patients with muscle invasive bladder cancer. *(dit proefschrift)*
4. Patients with muscle invasive bladder cancer treated with radical cystectomy live longer. *(dit proefschrift)*
5. It is generally accepted that computertomography urography is the preferred imaging technique for detecting upper tract lesions but it will not be the best urography modality in every patient. *(dit proefschrift)*
6. The opacification grade in the distal ureter is superior in retrograde ureteropyelography compared to computertomography urography. *(dit proefschrift)*
7. Retrograde ureteropyelography is a feasible urographic technique in early detecting of upper urinary tract tumors in patients diagnosed with urothelial cell carcinoma of the bladder or upper urinary tract. *(dit proefschrift)*
8. Er zit een groot verschil tussen zeggen wat je doet en doen wat je zegt.
9. The important thing is not the camera but the eye. *(Alfred Eisenstaed)*
10. Life is like riding a bicycle. In order to keep your balance, you must keep moving. *(Albert Einstein)*
